Notes about the Secured Roll Data

See Disclaimer below: This is provided as a convenience only. The user assumes full responsibility for checking the viability and accuracy of this information as well as any issues surrounding its use as a reference.

Agency CD Text Files

The text files in the *Agency CD* folder (SEC_TC601.TXT and SEC_TR601.txt) are created in June and are NOT updated throughout the year. Most of the data in the Access databases will be found in the SEC_TR601.txt file.

Access Databases

The Access databases in the Secured Roll folder are updated monthly with new parcel and ownership information. Values are not updated throughout the year.

About the Tables:

tblParcels is static throughout the year. If a parcel is inactivated, this will not be reflected in this table.

Newly created parcels are added to the *tblNewParcels* table. However, the now inactive parcel it came from is not removed from *tblParcels*. There is nothing in the database that relates the old parcels to newly created parcels.

tblNewParcelOwners contains the owners that have changed since the published roll in June. tblOwners is updated with new owner information, however, does not remove the old. In order to see who the current owner is you must check the "Latest" field and select the latest date.

Connecting to the GIS shp file

The GIS geometry can be downloaded for free from the GIS Department's web site: http://gis.stancounty.com/giscentral/public/downloads.jsp?main=4

This is in the form of a shp file consisting of the parcel outlines for the entire county. The only data attached to it is the APN associated with that parcel.

Joining

In the shp file there is an APN and an ASMT field (APN is simply ASMT without "000" on the end). You will want to use the **ASMT** field in the shp file and the **Asmt** field in the tblParcel and tblNewParcels tables in the Secured Roll database. *Note*: In tblParcel and tblNewParcel, there can be multiple Asmt numbers per FeeParcel, even though, in most records those fields are equal.
