Stanislaus County Department of Environmental Resources

ATTENTION TANK OWNER/OPERATOR

Enclosed you will find the "UNDERGROUND STORAGE TANK CONSTRUCTION PERMIT". A separate application and fee is required for each facility. Please print or type your responses in all the blanks applicable. This construction permit is not an operating permit. Owners and operators may be liable for a civil penalty of \$500 - \$5,000 per day for each underground storage tank for operating without a valid permit to operate (HSC 25299).

REMEMBER TO:

1. Have your Fire Department and Building Department, for the area of the facility, sign the application.
Important: your application cannot be approved without these signatures.
2. Confirm the proposed install, upgrade or removal or any changes within the week prior to that date.
3. Send copies of the insurance policy and Tank installers and Technicians ICC certifications who are working on-site prior to breaking ground.
4. Mark the appropriate boxes, fill out all applicable sections, sign the bottom parts and return with the permit fee.
5. Contact the local fire and building departments for their policy regarding installation, upgrade and removal of underground storage tanks prior to breaking ground.
6. Complete the Contractor's Declaration and return all copies.
7. Arrange for an inspection by the Department of Environmental Resources (48-hour notice).

Your permit fee should cover the average tank situation involving initial field work and interpretation by this Department. Where additional staff time is involved, you will be billed at the weighted labor rate.

PROCEDURE FOR CLOSURE OF UNDERGROUND STORAGE TANK(S)

1. Tank(s) and all associated plumbing shall be emptied of product and properly disposed of. All non-recyclable product and contaminated soil shall be handled as hazardous waste. Copies of manifests shall be sent to this office.
 2. Tank(s) shall be purged of all combustible vapors prior to removal by the addition of twenty (20) pounds of dry ice per each 1000 gallons of tank.
 3. Arrange for an inspection by the Department of Environmental Resources (48-hour notice).
 4. In order to determine the extent of any product loss, soil samples must be collected and analyzed by an approved laboratory. A written analysis report must be submitted to this Department within ten (10) working days. This report is subject to review and must be approved in order to be recognized as valid. Arrange for a soil sample to be taken by a California State Certified Laboratory at the time of closure according to the Stanislaus County sampling requirements. All samples to be taken from undisturbed soil via hand driven sleeve, below the tank(s) and piping.
- If test results demonstrate unacceptable levels of contamination in the soil or ground water, then the Department may take action pursuant to Chapters 6.5 and 6.7 of the California Health and Safety Code, Division 20.
5. In addition to the above-mentioned items, tanks to be closed in place must be partially filled with a sand slurry (tanks proposed for closure in place are considered on a case by case basis). The final 20% of tank volume must be filled with concrete. A notice shall be placed in the deed to the property. The notice shall describe the exact vertical and areal location of the closed underground storage tank, the hazardous substances it contained and closure method.
 6. All underground storage tanks to be moved off site shall be triple rinsed according to Department standards or transported as hazardous waste.

These are general instructions. Each case will be handled independently. If you have any questions or need assistance, call the Department of Environmental Resources (209) 525-6700.
