1. Introduction

Stanislaus County, in cooperation with Caltrans District 10, proposes to reconstruct the State Route 99 (SR 99)/Hammett Road interchange in northern Stanislaus County. This project will alleviate forecasted traffic congestion and improve operations at the Hammett Road interchange with SR 99. Extensive residential and commercial development is planned in the interchange vicinity, and a future roadway connection to the eastern communities will introduce new regional traffic volumes.

Two build alternatives and the no-build are proposed for further consideration. The build alternatives range in current cost from $73 to $94 million for construction and right of way. These alternatives and costs will be further refined at the Project Approval and Environmental Document (PA&ED) phase. The project is proposed for funding by a combination of Stanislaus County Public Facilities Fees and STIP funding.

This Project Study Report is prepared for the purpose of providing conceptual approval and for programming of the project. The County has initiated PA/ED phase in March 2009, and plans to initiate design in 2010 and construction in 2011. A Project Report will serve as approval of the "selected" alternative.

The appropriate Project Development Category for this project is Category 3, because it will require modification of existing access control, reconstruction of the existing interchange and local roads, and acquisition of new right of way, but will not require a route adoption.

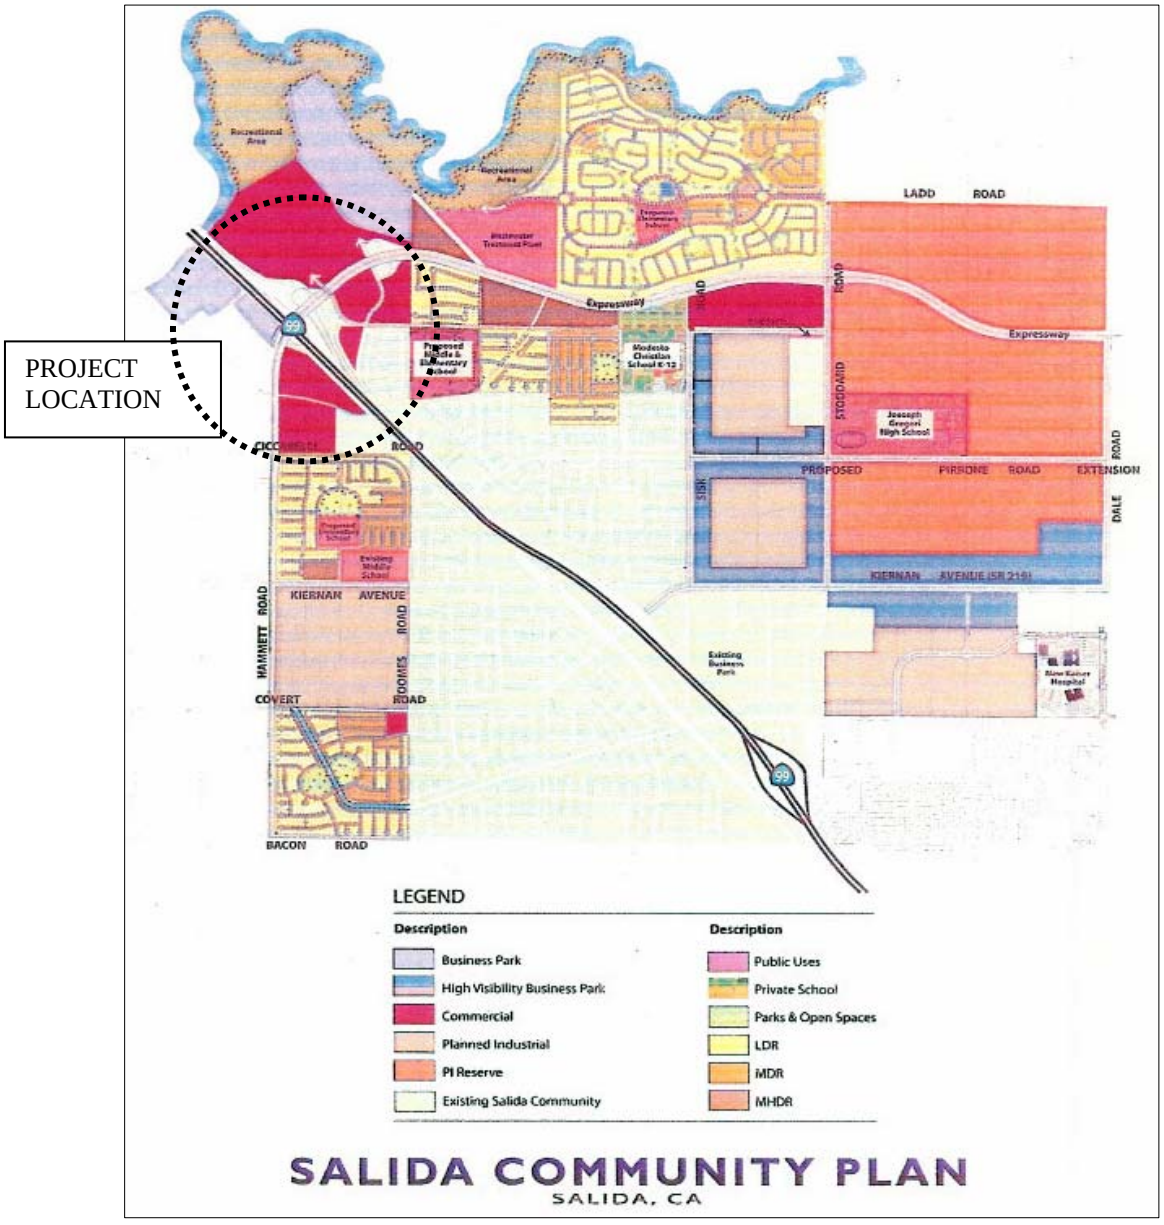
PROJECT INFORMATION:

Project Limits:	10-STA-99-PM R23.9/R25.1
Number of Alternatives:	3
Alternative Recommended for Programming:	Alternative 1 – Wide Diamond Interchange
Capital Construction Costs:	$ 61.0 million (current) (See the Cost estimate in **Attachment D** for specific work items included in this project.)
Capital Right of Way Costs:	$ 11.5 million (current)
Funding Source:	Local
Type of Facility (conventional, expressway, freeway):	Freeway/Local Interchange
Number of Structures:	2
Anticipated Environmental Determination/Document	Initial Study/Negative Declaration (CEQA) Environmental Assessment/FONSI (NEPA)
Project Category	3

2. Background

The SR 99/Hammett Road interchange is located in the north part of Stanislaus County, providing access to commercial and residential properties in the Community of Salida. The Salida area is undergoing rapid commercial and residential development and will result in generating considerable traffic to the interchange.

The Stanislaus County Board of Supervisors adopted the "Salida Now" initiative in August 2007 which provides infrastructure funding for industrial and commercial development. With a population of about 14,000, Salida is the largest town in unincorporated Stanislaus County. Salida's location along SR 99 at the far northern end of the county puts it within long-distance commuting range of the Bay Area. The County has adopted the Salida Community Plan, which will define the growth parameters for the next 20 years of the Salida Area.



Due to projected housing and commercial growth in the Salida area, the existing diamond interchange will not be adequate to accommodate forecasted traffic. Without improvement the level of service is forecasted to be “F” during peak periods.

The proposed interchange improvements include reconstruction of the existing interchange to provide improved operations for turning movements to and from SR 99, as well as associated local road improvements. The Proposed Project consists of reconstruction of interchange at SR 99/ Hammett Road and local road connections.

In addition, Caltrans, Stanislaus County and other local agencies are underway with environmental documentation of the North County Corridor (NCC) Project (EA 10-0S800). This road will provide approximately 24 miles of roadway on new alignment to enhance local traffic circulation and provide regional connectivity starting at the SR 99/Hammett Road Interchange on the west and extending eastward to Ellenwood Road, then northward to SR-120/108.

Attachment A provides the project vicinity map.

3. Purpose and Need Statement

3.1 PURPOSE

The purpose of the proposed project is to meet forecasted traffic demands at the SR 99/Hammett Road interchange.

The interchange ramps and local road connections are proposed to be re-configured and widened to provide improved operations for turning movements to and from SR 99 and for projected through traffic on Hammett Road and the future North County Corridor Project. The proposed bridge structures are to be designed to provide 16.5 feet of minimum vertical clearance over the roadbed of SR 99 and 23.0 feet of minimum vertical clearance over the railroad.

3.2 NEED

The need of the project is due to anticipated congestion and inadequacy of the existing interchange to accommodate future traffic needs.

Without improvement, the future levels of service at the existing ramp intersections would degrade to LOS F. Traffic at the ramp terminals would back up onto the SR 99 freeway exit ramps and cause significant congestion to SR 99 mainline operations.

The storage length available to accommodate forecasted westbound traffic is inadequate, and would result in long queues and congestion in the through lanes on Hammett Road.

3.3 TRAFFIC DATA

Year 2035 traffic forecasts are presented in the report titled "Traffic Forecast Results for: Hammett Road/SR 99 and Kiernan Avenue (SR 219)/SR 99 Project Study Reports", December 28, 2004, updated on April 12, 2007 by Dowling Associates. These traffic forecasts were approved by Caltrans Traffic Forecasting Division in May 2007. The average daily bi-directional traffic volume for SR 99 in the year 2035 is forecasted to be 177,100 between Hammett Road and Kiernan Avenue, and 222,900 between Hammett Road and 2ND Street. The design year 2035 peak hour and Average Daily Traffic (ADT) volumes are provided in **Table 1.**

TABLE 1
DESIGN (YEAR 2035) SR 99 MAINLINE TRAFFIC VOLUMES

Location		AM (vph)	PM (vph)	ADT
NB SR 99	Hammett Rd. to 2nd St.	10,810	10,860	111,450
	Kiernan Ave. to Hammett Rd.	9,600	8,400	88,100
SB SR 99	2nd St. to Hammett Rd.	9,270	12,160	111,450
	Hammett Rd. to Kiernan Ave.	7,300	9,900	89,000

3.4 ACCIDENT HISTORY

Caltrans provided accident data for SR 99 through the study corridor and the interchange ramps as shown in **Table 2**. This data shows that a total of 106 accidents were reported on the mainline during the three-year period from January 1, 2006 to December 31, 2008. At the ramps, a total of 9 accidents were reported. The accident rates are expressed in number of accidents per Million Vehicle Miles (MVM) for main line and Million Vehicles (MV) for intersections and ramps. Accident rates at all locations within the project limits were below the state average for similar facilities.

TABLE 2
ACCIDENT HISTORY

Facility	Number of Accidents			Accident Rate (accidents/MVM or MV)					
				Actual			State Average		
	Total	Fatal	Fatal + Injury	Total	Fatality	Fatal + Injury	Total	Fatality	Fatal + Injury
SR 99 (PM R023.900 to PM R024.749)	106	0	21	0.80	0.0	0.2	0.88	0.015	0.33
NB Off-Ramp to Hammett	1	0	0	1.79	0.0	0.0	1.50	0.005	0.61
SB On-Ramp From Hammett	1	0	0	1.75	0.0	0.0	0.80	0.002	0.32

SB Off-Ramp To Hammett	5	0	0	1.85	0.0	0.0	1.15	0.014	0.43

Source: Caltrans District 10 TASAS data between 01/01/2006 and 12/31/2008.

4. Deficiencies

4.1 TRAFFIC AND LEVEL OF SERVICE

The interchange of SR 99 and Hammett Road is an existing diamond interchange providing access to SR 99 from the Salida area of Northern Stanislaus County. In the future, it will be a highly traveled route with connections to Riverbank and Oakdale. Traffic volumes at this interchange are anticipated to increase due to the trips generated by development in the Salida area as well as eventual connection to the North County Corridor, which will access existing and developing areas of the north Modesto area, Oakdale and Riverbank. Traffic congestion does not currently occur at this interchange. Congestion will occur during peak periods with future growth.

Peak hour volume projections were generated by Dowling Associates using a modified Stanislaus Council of Governments (StanCOG) 2030 traffic model and updated to 2035. The future land uses in the vicinity of the subject interchanges include the full River Ranch development and West Salida Specific Plan, the Salida Community Plan. Roadway improvements planned include the connection and widening of Hammett Road to the west and east of SR 99.

Traffic Volumes & Lane Configuration

In the *2035 No Build Condition*, the existing interchange configurations would remain. However, the Hammett Road connection on the east side of SR 99 is planned to be constructed as an 8-lane facility while existing Hammett Road on the west side of SR 99 will be widened as 6-lane facility. The trip generation, trip distribution, trip assignment and traffic volume forecasts for the *2030 No Build Condition* is already approved by Caltrans and Stanislaus County in May 2007. The year 2030 volumes were updated for the year 2035 using approved growth factors. The memo "*2035 Traffic Forecast Results for Hammett Road/SR 99 and Kiernan Avenue/SR 99 Project Study Reports*" dated April 12, 2007 is provided in **Attachment J**.

Evaluation of 2035 No Build Traffic Condition

All analyzed intersections and ramp junctions are forecasted to operate at LOS "F" in the AM and PM peak hours in the *No Build Condition*. **Table 3** presents the summary of the *2035 No Build Condition* intersection level of service for weekday AM and PM peak hours. **Table 4** shows the *2035 No Build Condition* level of service summary for the ramp junctions at the interchange at Route 99 (Hammett Road).

TABLE 3
SR 99/HAMMETT INTERCHANGE
INTERSECTION LEVEL OF SERVICE SUMMARY

6. SB SR 99 merge at Hammett Road on-ramp	A.M.	**F**
	P.M.	**F**

Bold indicates unacceptable level of service and delay

4.2 EXISTING NONSTANDARD DESIGN ELEMENTS

The current interchange was constructed in 1969, and has several design elements that do not meet current Caltrans highway design standards, as follows:

- *Vertical Clearance*
  The vertical clearance of the Hammett Road Overcrossing of NB SR 99 is 16.1 ft., which is less than the 16.5 feet standard.

5. Corridor and System Coordination

5.1 ROUTE DESCRIPTION

SR 99 is a major freeway in California, serving as an alternate route to Interstate 5 from south of Bakersfield to Red Bluff. It serves almost all of the urbanized areas in the Central Valley. Within Stanislaus County, it is the major north-south transportation corridor and is the major interregional connector to the Bay Area. Stanislaus County, and especially the Salida area, is expected to experience rapid residential, commercial and industrial growth adjacent to SR 99. SR 99 has six lanes through northern Stanislaus and southern San Joaquin Counties. All ramps at the interchange of SR 99 and Hammett Road are single lane ramps. The ramp intersections at Hammett Road are un-signalized.

Hammett Road is currently an arterial that terminates just east of the SR 99 interchange at Pirrone Road, and extends to the southwest to connect with Broadway Avenue in Salida.

Pirrone Road is a local collector street that serves the Salida neighborhood east of SR 99 and north of Kiernan Avenue. It is planned to be widened to 4 lanes in the future.

Ladd Road is a rural two-lane local road that currently terminates at Stoddard Road on its west end.

Sisk Road is a local road that runs in a north-south direction east of SR 99.

5.2 SYSTEM DESIGNATION

SR 99 is a primary route for movement of freight and goods. This route is on the National Network for STAA Trucks, with portions of SR-99 designated as a SHELL route for transporting "Permitted" over dimensional load. Between Bakersfield and Sacramento this route is identified as an Intermodal Corridor of Economic Significance (ICES) as mandated by Assembly Bill 1823, Statues of 1993.

Hammett Road is currently an arterial that terminates just east of the SR 99 interchange at Pirrone Road. A proposed project is planned by Stanislaus County and will extend Hammett Road east from the Hammett Road Interchange to Dale Road and beyond. The new Hammett Road will be arterial road to serve new land developments.

5.3 PLANNING HORIZON

The project location is in an urban area. The existing **SR 99** facility is a 6-lane freeway. The concept Level of Service (LOS) is “C” for rural areas and “D” for the urban areas for SR 99. The Caltrans draft transportation concept report (TCR) for this segment of SR-99 identifies a 20-year planning concept to be an 8-lane freeway to meet a concept LOS “D.”

5.4 PROGRAMMED PROJECTS

The StanCOG RTP Tier 1 Fiscally Constrained list includes a widening project on SR 99 from Ceres to Kiernan Avenue from six lanes to eight lanes to be open to traffic by 2010. There is no current funding for the SR 99 widening.

TABLE 5
PLANNED AND PROGRAMMED PROJECTS IN THE VICINITY

STATUS	Expenditure Authorization	Route – Post Mile	Location	Description	Begin Construction
Programmed / Funded /Partially Funded	0K700	SR 219 – 00.10	SR-99/SR-219	Reconstruct NB/SB off-ramps, relocate maintenance vehicle pullout/modify signals	May 2009
Planned	0L330	SR 219 - 00.10	SR-99/SR-219	Reconstruct SR-99/SR-219 Interchange	August 2011
Planned	0S800	TBD	North County Corridor	4-8 lane highway	TBD
Planned	0L5901		SR-99	Modesto Corridor Tree Project	

There is no project identified in the StanCOG Regional Transportation Plan for widening of SR 99 to eight lanes north of Kiernan Avenue.

Improvements to **Hammett Road** are identified in the Stanislaus Area Regional Transportation Plan (RTP) Long-Range Improvement Program as well as the Regional Expressway Study. The ultimate concept for Hammett Road is a six-lane / eight-lane roadway with limited access.

The StanCOG RTP Tier 2 Fiscally Constrained list includes the **Hammett/SR 99 interchange** project.

Table 5 shows a summary of known programmed projects.

North County Corridor

The North County Corridor (NCC) Project (EA 10-0S800) would provide approximately 24 miles of roadway on new alignment to provide interregional connectivity from SR 99 easterly to approximately 7.7 miles east of the SR 120/108 junction. It is anticipated that the ultimate facility type would be a four to eight lane controlled access highway. The preliminary study limits are defined as starting at the SR 99/Hammett Road Interchange on the west and extending eastward to Ellenwood Road, then northward to SR 120/l08 and ending east of the Oakdale Community. The proposed North County Corridor project is being developed as a replacement for the SR 108 Oakdale Bypass project. The California Transportation Commission (CTC) has funded NCC environmental studies in the STIP. Recently, the NCC alignment and limits has changed, and would start from McHenry Avenue (SR-108) and traverse to the east to SR-120 in Oakdale.

For the purpose of the Hammett Road/SR 99 interchange project alternatives, the NCC is considered a local road project, also known as the “Hammett Road Extension” or the “Salida Expressway.” It is assumed that NCC segments that might meet the CTC’s conditions lie east of McHenry Avenue, or more significantly that the segment connecting to SR 99 would be a local road.

Caltrans has discussed with the County that, if the NCC connects to SR 99, and were proposed for transfer or adoption into the state highway system, a HDM freeway-to-freeway interchange should be assumed. Interchange spacing would then become an issue with both the Kiernan Avenue and Hammett Road interchanges on SR 99 and the Pirrone Road interchange on NCC. Future interchange spacing, interchange removal or modification, or approval of interchange spacing design exceptions would be required, depending on the outcome of NCC environmental studies, NCC project limits, timing, alignment selection and route adoption.

The NCC project information will be updated in the Project Report, PA&ED phase.

5.5 UNION PACIFIC RAILROAD

The **Union Pacific Railroad** traverses north-south through the area, with a grade-separated crossing under Hammett Road west of the SR 99 at the interchange. The average number of trains per day is 19. New railroad grade separation bridges are need for Hammett Road and for the ramps as part of the proposed improvements.

6. Alternatives

6.1 ALTERNATIVES DESCRIPTION

The Project Development Team (PDT) explored a number of viable alternatives at the Hammett Road interchange during the PSR phase. The Traffic Operations Report was submitted with the following two build alternatives for review:

Alternative 1 – Widen exist diamond interchange
Alternative 2 – Reconstruct as new partial cloverleaf interchange

Both alternatives have been approved by District Traffic Operations for inclusion in this PSR and to be studied during PA/ED phase. During the review and approval of the traffic operations report, Caltrans requested that additional alternatives be studied in the PA/ED phase.

NO-BUILD ALTERNATIVE

The **No-Build Alternative** would leave the existing interchange in its current diamond configuration. No new ramp improvements or freeway auxiliary lanes would be constructed with this alternative. Unacceptable levels of service would occur at the ramp junctions and the freeway would not accommodate forecast traffic volumes.

BUILD ALTERNATIVES

Alternative 1 – Widen Exist (Type L-1) Diamond Interchange

Alternative 1 is the Recommended Alternative for the purpose of right of way definition and programming. This alternative would replace the current bridge over SR 99 with a wider bridge with increased vertical clearance over SR 99, thus eliminating an existing nonstandard vertical clearance condition. The existing interchange ramps, intersections and local roads connections would be widened or reconstructed to accommodate forecasted turning movements and though traffic. The NB on-ramp and SB Off-ramp would be reconstructed to provide adequate capacity and storage. The NB off-ramp and SB on-ramp would be modified with additional lanes. Traffic signals would be added to Hammett Road at the termini of the exit ramps. All on-ramps would have ramp metering and HOV bypass lanes. The Hammett Road Bridge over SR 99 would be widened to accommodate the eight-lane planning concept, bike lanes and sidewalks. Utility relocations would include PG&E 12" gas transmission pipeline on private property in an exclusive easement on the east side of SR 99, AT&T direct buried cable on private property in an exclusive easement on the east side of SR 99, MID has an overhead distribution facility on the east side of SR 99 on private property in an exclusive easement. The Geometric Approval Drawings (GADs) and bridge Advance Planning Studies (APS) for Alternative 1 are provided in **Attachment B**. The estimated construction and right of way cost for this alternative in current dollars is as follows:

Total Roadway Items	$ 42,300,000
Total Structure Items	$ 18,700,000
Subtotal Construction Costs	$ 61,000,000
Total Right Of Way Items	$ 11,500,000
Total Project Capital Outlay Costs	**$ 72,500,000**

Alternative 2 - Construct New (Type L-8) Partial Cloverleaf Interchange

This alternative would replace the existing diamond interchange with a modified type L-8 partial cloverleaf interchange with exit loop ramps. The NB on-ramp and SB off-ramp would be reconstructed to provide adequate capacity and storage. The NB off-ramp and SB on-ramp would be modified for additional lanes. Two new loop off-ramps would be built. Also two new traffic signals would be added to Hammett Road at the termini of exit ramps. All on-ramps would have ramp metering and HOV bypass lanes. A new Hammett Bridge over SR 99 would be built to accommodate the eight-lane planning concept, bike lanes and sidewalks. Utility relocations would be the same as Alternative 1. The Geometric Approval Drawings (GADs) and bridge APS for Alternative 2 are provided in **Attachment C**. The estimated construction and right of way cost for this alternative is as follows:

Total Roadway Items	$ 49,600,000
Total Structure Items	$ 32,000,000
Subtotal Construction Costs	$ 81,600,000
Total Right Of Way Items	$ 11,500,000
Total Project Capital Outlay Costs	**$ 93,100,000**

Cost estimates for both alternatives are provided in **Attachment D**. The right of way data sheet is provided in **Attachment E**.

Additional Alternatives to be Studied in PA&ED

Alternative 3 – TYPE L-7 Interchange

Caltrans District 10 Traffic Operations Branch requested that the following be evaluated using Alternative 2 during the PA/ED phase with the following modifications:

- Remove WB left-turn lane to SB On-Ramp and provide WB free right-turn SB On-Ramp loop.
- Remove SB Off-Ramp Loop and provide SB Off-Ramp with triple left-turn lanes at the intersection.
- Remove EB dual left-turn lanes to NB On-Ramp and provide EB free right-turn to NB On-Ramp loop.
- Remove NB Off-Ramp loop and NB free right by providing NB Off-Ramp to the intersection.
- Add NB loop on-ramp.

6.2 DESIGN EXCEPTIONS

The following is the design exception identified for the recommended alternative:

Nonstandard Feature:
Nonstandard Curb Ramps (Advisory Standard): At each corner of the interchange, two curb ramps need to be installed, but there is only one curb ramp at the corner of the intersection for the north side of Hammett Road. The nonstandard curb ramps are located at the intersection of Hammett Court/Hammett Road, southbound off-ramp/Hammett Road and northbound on-ramp/Hammett Road. The fact sheet for the Advisory Design Exception will be submitted in the PA/ED phase.

6.3 STORM WATER DISCUSSION

A Storm Water Data Report was prepared by Rajappan & Meyer Consulting Engineers and was approved by the District 10 Storm Water Coordinator on 5/26/09. The cover sheet of the Storm Water Data Report (SWDR) is provided in **Attachment F**. The proposed project does not change the existing flow pattern, with storm water runoff from new and existing pavement of the interchange ramps and Hammett Road directed into new infiltration basins proposed within the project limits as general purpose permanent treatment devices. The proposed infiltration basins are designed to provide full treatment of storm water runoff within the project area for the Water Quality Flow event. Runoff from the SR 99 mainline will continue to flow to the existing underground drainage system, with an outflow to the Stanislaus River at the north end of the project.

The project would include Design Pollution Prevention BMPs and Temporary Construction Site BMPs as required. Provision is made in the project cost estimates to extend the existing cross drainage structures to convey the storm water discharge. More detailed investigations and studies are required in the initial design phase to confirm the hydraulic and structural adequacy of the existing drainage system.

6.4 TRANSPORTATION MANAGEMENT PLAN

A Transportation Management Plan (TMP) Checklist has been prepared to identify traffic control strategies necessary to reduce vehicle delays during construction. The TMP Checklist is provided in **Attachment G**. It is anticipated that temporary lane closures would be required for setting K-rail and lane width reductions would be required for work zones. Provision is made for changeable message signs, K-rail and temporary traffic screens during construction. The project cost estimate includes $250,000 for TMP and $450,000 for COZEEP. The District 10 Traffic Management Unit would be consulted to develop a concise TMP limits.

6.5 TRAFFIC OPERATIONS

The Traffic Operations Report was prepared by Rajappan & Meyer Consulting Engineers, Inc. and conditionally approved by Caltrans District 10 Traffic Operations Unit on January 13, 2009. Level of service analysis was performed for the study intersections for each build alternative for Year 2035 AM and PM peak hour traffic. All ramp intersections in build Alternatives 1 and 2 operate at LOS “C” or better in the design year, based on Synchro results given in **Table 6**.

TABLE 6
SR 99/HAMMETT INTERCHANGE
INTERSECTION LEVEL OF SERVICE SUMMARY (SYNCHRO) (Year 2035)

Intersection	Peak hour	2035 No-Build			2035 Alternative 1			2035 Alternative 2		
		LOS	Control Delay (Sec)	V/C	LOS	Control Delay (Sec)	V/C	LOS	Control Delay (Sec)	V/C
Hammett Road and SR 99 SB off-ramps	A.M.	**F**	**1471.7**	**-**	C	24.8	0.84	A	8.0	0.49
	P.M.	**F**	**1761.3**	**-**	C	26.6	0.90	B	10.4	0.65
Hammett Road and SR 99 NB off-ramps	A.M.	**F**	**2115.2**	**-**	B	14.0	0.84	A	3.0	0.58
	P.M.	**F**	**2149.0**	**-**	C	14.6	0.80	A	5.5	0.73

- Intersection is not present in Alternative
Bold indicates unacceptable level of service and delay The results are based on the analysis done based on Synchro 7

The SimTraffic software was used to calculate the delay in order to take into account the effects of the adjacent intersections. The SimTraffic results are given in **Table 7.** All ramp intersections in build Alternatives 1 and 2 operate with acceptable delay in the design year.

TABLE 7
SR 99/HAMMETT INTERCHANGE
INTERSECTION LEVEL OF SERVICE SUMMARY (SIMTRAFFIC) (Year 2035)

Intersection	Peak hour	2035 No-Build			2035 Alternative 1			2035 Alternative 2		
		LOS	Delay (Sec)	Density	LOS	Delay (Sec)	Density	LOS	Delay (Sec)	Density
Hammett Road and SR 99 SB off-ramps	A.M.	**F**	**9059.3**	**36**	C	22.8	201	A	7.9	301
	P.M.	**F**	**7823.1**	**35**	C	28.0	146	A	8.9	223
Hammett Road and SR 99 NB off-ramps	A.M.	**F**	**1373.9**	**28**	B	18.4	122	B	10.9	212
	P.M.	**F**	**3473.2**	**36**	B	19.1	124	A	9.3	232

- Intersection is not present in Alternative
Bold indicates unacceptable level of service and delay. The results are based on the analysis done based on SimTraffic 7

The freeway level of service will not be improved by the project. The mainline operations will be at LOS F for both AM and PM design year periods, with the project or with the no-build condition. Mainline improvements needed to achieve a better level of service would include mainline widening, which is outside the scope of the current project.

6.6 RIGHT OF WAY DISCUSSION

A Right of Way Data Sheet was prepared for the Recommended Alternative by Associated Right of Way Services and was approved by Central Region Right of Way on 7/08/09. The proposed project would require acquisition of 19.0 acres of farmland. No displacements would be required to construct the interchange. It is anticipated that San Joaquin County would be responsible for right of way appraisals, acquisition and condemnation, if needed. The County has indicated that 12 months is sufficient time to acquire the right of way after maps are approved.

No permanent right of way is required from the Union Pacific Railroad (UPRR). However, a Construction and Maintenance Agreement will be required to be executed between the County and the UPRR in order to construct the Hammett Road Overhead bridge widening. It is anticipated that the C&M agreement will require 12-18 months to process, starting concurrently with final design tasks.

6.7 VALUE ANALYSIS

The Value Analysis Study will be completed in the PA&ED phase.

7. Community Involvement

Initial public meetings were held in November 2004 to present the scope of interchange improvements. Broad community support was expressed for the interchange modification. No known opposition exists.

Additional public meetings will be held by Stanislaus County during the PA&ED phase. These meetings will provide opportunity for members of the public and other public agencies to comment or request clarification about the proposed project and related documents,

8. Environmental Determination/Document

A Preliminary Environmental Analysis Report (PEAR) was prepared by LSA Associates, approved by Caltrans Central Region Environmental Unit on January 12, 2009, and is provided in **Attachment H**. This section describes the findings of the PEAR document.

8.1 ANTICIPATED ENVIRONMENTAL APPROVAL

The anticipated environmental documentation would be an Initial Study/Mitigated Negative Declaration for the California Environmental Quality Act and Environmental Assessment/Finding of No Significant Impact for the National Environmental Policy Act, should federal or STIP funding be sought by the County. Caltrans would be the lead agency for the purposes of both the California Environmental Quality Act and the National Environmental Policy Act.

8.2 FOCUSED STUDY REQUIREMENTS

Focused studies for each project alternative (Alternatives 1 and 2) during PA/ED will need to include traffic, water quality and erosion, air quality and noise, cultural resources, visual, hazardous waste/materials, farmland conversion, biological resources, climate change, and greenhouse gas discussions in accordance with Caltrans' latest procedures. A number of key environmental issues are associated with these alternatives. Potential effects on resources within the Stanislaus River may occur due to bridge widening on SR 99.

Impacts may occur to sensitive biological species (e.g., anadromous fish, Swainson's hawk, burrowing owl, nesting birds and roosting bats). Studies may be necessary to evaluate habitat potential for burrowing owls, and foraging habitat for raptors. Several trees (including oak trees) along the support roadway network will be removed by interchange improvements. Ultimately, preconstruction surveys may be required to establish presence of sensitive species (e.g., burrowing owl, nesting birds, roosting bats, Swainson's hawk). Valley elderberry longhorn beetle impacts may also occur if project improvements impact adjacent blue elderberry plants.

Mitigation may include elderberry plant compensation, and tree replacement. Resource/regulatory agency permits are anticipated where impacts may occur within or adjacent to the Stanislaus River. Noise from expanding roadways and increase traffic volumes may be a concern to sensitive receptors within or adjacent to the project area. Noise barrier mitigation may be required to protect sensitive receptors. Air quality conformity will be required to determine the potential effects from expanding the support roadway network. Additional testing for hazardous materials/waste contamination may be required, including the potential issues associated with replacing bridge structures within the proposed right-of-way. Further documentation of potentially historic resources, including railroad, canal and farmstead resources, is required to determine potential for eligibility to the National Register of Historic Places, potential project effects and mitigation responsibilities (should impacts to eligible resources occur). Minor agricultural impacts relating to interchange improvements may warrant compensation for loss of row crop lands. Special considerations under these alternatives include potential seasonal constraints. A work window may be enforced as avoidance for fish passage, nesting swallows or other birds (March 1 through October 31). No other special considerations are anticipated under these alternatives.

8.3 POTENTIAL EFFECTS/MITIGATION ESTIMATES

The following paragraphs address mitigation requirements for each focused area to reduce, minimize, or compensate for project losses. Cost estimates are provided for each mitigation measure.

Visual/Aesthetics – Interchange reconstruction is not expected to impact any important aesthetic or scenic resources in light of the urban character of the study area. Nonetheless, existing structures and landscaping must be replaced and the aesthetic value of the oak trees should be mitigated. The mitigation costs are estimated at $225,000 for landscaping and scenic resources.

Water Quality and Erosion – Standard erosion control measures and Best Management Practices will be required to mitigate erosion and water quality during construction. Costs are included in construction estimate and are estimated at $25,000. Drainage basins may be required to store excess runoff. Costs for basins are included in construction estimate and are typical.

Air Quality and Noise - An Air Quality study and a Noise study will be conducted to analyze the possible project related impacts. The project must conform to the Clean Air Act on a regional and project level. Standard dust control measures and compliance with San Joaquin Valley Unified Air Pollution Control District rules and regulations during construction. Costs are included in construction estimate and are typical. Noise barrier attenuation may be required adjacent to existing residential subdivision (southeast interchange quadrant). Costs for noise barriers are estimated at $100,000.

Cultural Resources – Pre-historic and historic resources could be present within the project area and could be impacted by the proposed improvements. Mitigation of cultural resources may be required, if determined eligible for the National Register. Costs are estimated at up to $145,000.

Hazardous Wastes/Materials – Several actions may be required to resolve potential hazardous waste issues including removal of thermoplastic striping, and testing of lead paint on bridge structures. Studies for aerially deposited lead will be conducted prior to construction activities. If Naturally Occurring Asbestos is suspected, testing will also be conducted. Measures will be identified to protect the health and safety of construction workers. Costs are estimated at approximately $50,000.

Biological Resources – Loss of habitat and trees (including oak trees) may occur despite the urban setting of the interchange area. Costs to replace habitat/trees within the project boundaries are estimated at $220,000. Seasonal restrictions for fish passage and nesting birds are anticipated during project construction.

9. Funding and Programming

9.1 CAPITAL COST

Alternative 1 is the **RECOMMENDED ALTERNATIVE**. This alternative would replace the existing diamond interchange with a type L-1 wide diamond . The NB on-ramp and SB off-ramp would each be reconstructed to provide adequate capacity and storage. The NB off-ramp and SB on-ramp would be modified for additional lanes. All on-ramps would have ramp metering and HOV bypass lanes. A new Hammett Road Bridge over SR 99 would be build to accommodate eight vehicle lanes, bike lanes and sidewalk. The estimated construction and right of way cost for this alternative in current dollars is as follows:

Total Roadway Items	$ 42,300,000
Total Structure Items	$ 18,700,000
Subtotal Construction Costs	$ 61,000,000
Total Right Of Way Items	$ 11,500,000
Total Project Capital Outlay Costs	**$ 72,500,000**

The escalated values for all construction, right of way and support costs are provided in the following **Table 10:**

TABLE 10
ESCALATED IMPLEMENTATION COSTS

COMPONENT	PCT	OF	CURRENT DOLLARS	START OF COST	ANNUAL PCT ESCALATION	ESCALATED COST
PS&E	7.0%	CONST	$5,075,000	1/1/2010	0.0%	$5,080,000
R/W Support	5%	R/W	$575,000	9/1/2010	3.5%	$590,000
R/W Capitol	100%	R/W	$11,493,000	9/1/2010	3.5%	$11,790,000
Constr. Support	10.0%	CONST	$7,250,000	12/1/2012	3.5%	$8,040,000
Construction	100%	CONST	$72,500,000	12/1/2012	3.5%	$80,390,000
TOTAL ESCALATED COST			**$96,893,000**			**$105,890,000**

9.2 CAPITAL SUPPORT ESTIMATE FOR PROGRAMMABLE ALTERNATIVE

A cooperative agreement has been executed between Caltrans and Stanislaus County for PA&ED, design and construction of all project locations. Caltrans District 10 would provide environmental and design oversight and approval of the project at reimbursed cost. The Approved Cooperative Agreement is provided in **Attachment I** for the PA&ED phase. Caltrans would provide planning and design oversight. Stanislaus County would prepare the Environmental Document and Project Report for Caltrans approval, and the PS&E package. The County would acquire right of way, advertise and award the project, and administer the construction contract, with Caltrans oversight.

Estimated support costs for the project are shown in **Table 11**. The assumed rate of escalation is 3.5%.

TABLE 11
ESCALATED SUPPORT COSTS

COMPONENT	FY 08-09	FY 09-10	FY 10-11	FY 11-12	FY 12-13	TOTAL
PS&E		$5,080,000				$5,080,000
R/W Support			$590,000			$590,000
Constr. Support					$8,040,000	$8,040,000
TOTAL ESC. COST		# $5,080,000	$590,000		$8,040,000	**$13,710,000**

9.3 FUNDING

The project is anticipated to be funded by a combination of Public Facility Fee (PFF) and future sales tax revenue. Stanislaus County has currently collected some traffic mitigation funds through City/County Transportation Facilities Public Facility Fee (PFF) program. The anticipated collection through the PFF is $50-$100 million for this project.

9.4 AGREEMENTS/PERMITS

The following agreements will be required prior to construction:

1. Executed Cooperative Agreement for PA/ED, Design and Construction.
2. Freeway Maintenance Agreement is required between Stanislaus County and Caltrans for Hammett Road. A draft agreement and exhibit (plans) will be provided when the project is in the PS&E stage/process.
3. UPRR Construction and Maintenance Agreement. This agreement would require 12-18 months to obtain.
4. Caltrans Encroachment Permit (if construction is by County).
5. Utility relocation agreements with PG&E, AT&T and MID.

10. Schedule

Table 12 provides the proposed schedule for delivery of project milestones for the Recommended Alternative:

TABLE 12
PROPOSED MILESTONE SCHEDULE

No.	Milestone	Date
1.	M000 - IDENTIFY NEED	03/01/2004

Entered PMCS Screens ___/___/___ by _____

Entered AGRE Screen (Railroad data only) ___/___/___ by _____

4. Are there any major items of construction contract work? Yes ☒ No ☐ (If "Yes," explain.)

There will be Caltrans construction encroachment permits to construct a bridge during construction time.

5. Provide a general description of the right of way and excess lands required (zoning, use, major improvements, critical or sensitive parcels, etc.). No right of way required. ☐

Land zoning and Specific Plan areas in the project site consist of commercial, industrial and agricultural uses.

6. Is there an effect on assessed valuation? Yes ☐ Not Significant ☒ No ☐ (If "Yes," explain.)

7. Are utility facilities or rights of way affected?
Yes ☒ No ☐ (If "Yes," attach Utility Information Sheet, Exhibit 4-EX-5.)
The following checked items may seriously impact lead time for utility relocation:
☐ Longitudinal policy conflict(s)
☐ Environmental concerns impacting acquisition of potential easements
☐ Power lines operating in excess of 50 KV and substations
(See attached Exhibit 4-EX-5 for explanation.)

8. Are Railroad facilities or rights of way affected?
Yes ☒ No ☐ (If "Yes," attach Railroad Information Sheet, Exhibit 4-EX-6.)

9. Were any previously unidentified sites with hazardous waste and/or material found?
Yes ☐ None Evident ☒ (If "Yes," attach memorandum per R/W Manual, Chapter 4, Section 4.01.10.00.)

10. Are RAP displacements required? Yes ☐ No ☒ (If "Yes," provide the following information.)

No. of single family 0 No. of business/nonprofit 0

No. of multi-family 0 No. of farms 0

DRIS will be prepared in PA/ED phase.

11. Are there Material Borrow and/or Disposal Sites required? Yes ☐ No ☒ (If "Yes," explain.)

12. Are there potential relinquishments and/or abandonments? Yes ☐ No ☒ (If "Yes," explain.)

13. Are there any existing and/or potential airspace sites? Yes ☐ No ☒ (If "Yes," explain.)

RIGHT OF WAY DATA SHEET (Cont.)

(Form #)

14. Indicate the anticipated Right of Way schedule and lead time requirements. (Discuss if district proposes less than PMCS lead time and/or if significant pressures for project advancement are anticipated.)

Based on the R/W requirements on Page 1 of this Data Sheet, R/W will require a lead time of 12 months from the date regular appraisals can begin to project certification.

In any event, RW Maps will require 8 months from Final Maps to project certification.

15. Is it anticipated that Caltrans staff will perform all Right of Way work? Yes ☐ No ☒ (If "No," discuss.)

The Stanislaus County is the sponsor of the project. County will perform right of way work.

Evaluation Prepared By:

Right of Way: Name _____ Date 04/28/09
Steven L. Castellano, SR/WA
Right of Way Consultant
Associated Right of Way Services, Inc.

Railroad: Name _____ Date 6/19/09
~~Bo Gao~~

Utilities: Name _____ Date 4/23/09
John Beebe

Recommended for Approval:
_____ Date 6/19/09
Keith G. Meyer, P.E.

I have personally reviewed this Right of Way Data Sheet and all supporting information. I certify that the probable Highest and Best Use, estimated values, escalation rates, and assumptions are reasonable and proper subject to the limiting conditions set forth, and I find this Data Sheet complete and current.

STATE OF CALIFORNIA● DEPARTMENT OF TRANSPORTATION

UTILITY INFORMATION SHEET

SR 99 at Hammett Rd. Alternative 1

EXHIBIT
4-EX-5 (REV 3/2004)

1. Name of utility companies involved in project: AT&T, PG&E Gas Transmission, and the Modesto Irrigation District (MID)

2. Types of facilities and agreements required: PG&E has a 12" gas transmission pipeline on private property in an exclusive easement on the east side of SR 99. AT&T has a direct buried Cable on private property in an exclusive easement on the east side of SR 99. MID has an overhead distribution facility on the east side of SR 99 on private property in an exclusive easement. Those PG&E, AT&T, and MID facilities in superior easement rights and will require like rights.

3. Is any facility a longitudinal encroachment in existing or proposed access controlled right of way? Yes

   Disposition of longitudinal encroachment(s):
   [X] Relocation required.
   Exception to policy needed.
   Other. Explain.

4. Additional information concerning utility involvements on this project, i.e., long lead time materials, growing or special seasons, customer service seasons (no transmission tower relocations in summer). The PG&E gas transmission pipeline is a long lead item with seasonal restrictions

5. PMCS Input Information
   Total estimated cost of State's obligation for utility relocation on this project:
   $ 3,325,500

   Note: Total estimated cost to include any Department obligation to relocate longitudinal encroachments in access controlled right of way and acquire any necessary utility easements.

RAILROAD INFORMATION SHEET

(Form #)

EXHIBIT
4-EX-6

1. Describe railroad facilities or right of way affected.

   Union Pacific Railroad cross Hammett Road. A wider bridge will be build over the railroad.

2. When branch lines or spurs are affected, would acquisition and/or payment of damages to businesses and/or industries served by the railroad facility be more cost effective than construction of a facility to perpetuate the rail service? Yes _____ No __X___
   (If yes, explain)
   No branch lines or spurs are affected.

3. Discuss types of agreements and right required from the railroads. Are grade crossings requiring service contracts or grade separations requiring construct and maintenance agreements involved?

   Grade separations are required for construction of new bridge along with new maintenance agreements.

4. Remarks (non-operating railroad right of way involved?): None.

D-10 TRAFFIC MANAGEMENT: DELIVERY- MEMO

To: Alex Ng	From: Karen Mai D-10 Traffic Management	Date: 9/18/08
Cc: FILE, D-10 PIO	Phone: (209) 942-6089	

MESSAGE

Re: EA #0L320K

Attached is the Approved TMP Checklist, Lane Requirement Charts, and Table Z for the above mentioned project.

Please include a copy of the TMP Checklist in the RE Book with all supporting Documentation.

We request the following:

a. *Contractor shall work with RE/Inspector to request the necessary lane closures needed. Requests shall be made the week prior to the actual work. Inspector shall submit closure through the Lane Closure System (LCS) for our approval by Wednesday afternoon of the week prior.*

b. *All lane closures shall be called in by either the Contractor to the Traffic Management Center (TMC) when the closure begins (10-97), ends (10-98), or is canceled (10-22). The TMC can be reached 24-7 at (209) 948-7556 or 7551.*

c. *Use proper Traffic Control devices throughout the duration of the project as per Caltrans Standard Specifications.*

d. *Please verify PM R 25.1*

Please call if you have any questions regarding the attached information.

Preliminary Environmental Analysis Report

Project Information

District 10 County Stanislaus Route 99 Post Mile STA 23.8/24.8 SJ 0.0/0.4 EA OL320K

Project Title: Hammett Road/Route 99 Interchange Reconstruction Project

Project Manager: Christina Hibbard, Caltrans District 10 Phone # (209) 948-7889

Design Engineer: Bo Gao, Rajappan & Meyer Consulting Engineers Phone # (408) 280-2772

Environmental Manager: Gail Miller Phone # (559) 243-8274

Environmental Planner Generalist: Raychel Skeen Phone # (559) 243-8266

Project Description

Purpose and Need: The purpose of the project is to expand the interchange to better accommodate projected vehicular, pedestrian, and bicycle traffic associated with planned housing and business development in the Salida Community Plan area. Figure 1 describes the Regional Vicinity and Project Location.

The need of the project is due to anticipated congestion and inadequacy of the existing interchange to accommodate future traffic needs.

The project will also include realignment of existing local road connections to provide standard spacing from the interchange ramps. Bicycle and pedestrian access are proposed to meet American with Disabilities Act Standards to provide safe travel across the interchange. An existing bicycle/pedestrian trail must be realigned to accommodate the new geometry. Auxiliary lanes and other operational improvements will be investigated to improve access to and from the mainline of State Route 99. The new interchange overcrossing structure will be widened to accommodate an ultimate 8-lane State Route 99 per Caltrans policy.

Description of work: The proposed project involves reconstruction of the existing Hammett interchange including the overcrossing, on and off-ramps, and roadway segments within the interchange area. On and off-ramps will be widened to accommodate greater traffic volumes entering and exiting the mainline. Depending on the alternative, the overcrossing will either be widened or replaced as necessary to accommodate the widening of Hammett/Ladd Road, and the widening of State Route 99. The new interchange overcrossing structure will have a six-lane cross section that conforms with a six-lane cross section for Hammett/Ladd Road widening. Pirrone Road will be extended to the northeast intersecting with the planned Ladd Road that will extend east of the northbound on and off-ramps.

Hammett Court will be realigned to intersect Hammett Road close to perpendicular, as well as provide at least 160 meters from the southbound ramps. The unsignalized intersection will allow left turns from Hammett Road to Hammett Court and from Hammett Court to Hammett Road.

The existing State Route 99 bridge structure over the Stanislaus River will be widened to accommodate forecast traffic volumes associated with the long-term interchange improvements (e.g., ramp extensions) and could affect resources in or adjacent to the river. Widening improvements are needed to accommodate the northern-most interchange improvements as the ramp extensions and auxiliary lanes taper or transition on/off of State Route 99. With these transitional improvements on State Route 99, the bridge structure will require widening and placement of additional columns within the live river channel, and potentially adversely impact anadromous fish species. Likewise, riparian resources could be affected during construction, including oak trees and blue elderberry bushes that potentially provide habitat for the valley elderberry longhorn beetle.

Alternatives:
Two alternatives plus the No Build alternative are being considered for reconstruction of the proposed interchange.

Alternative 1 is an Expanded Diamond interchange alternative that will accommodate predicted traffic volumes up to year 2030. In order to achieve standard vertical clearance with State Route 99, the northbound State Route 99 lanes will have to be lowered or the existing overcrossing will need to be replaced with a higher bridge overcrossing. Widening of the overcrossing to a six-lane cross section will be required to conform with locally planned roadway improvements. The northbound auxiliary lane will extend for 300 meters from the merge point of the northbound onramp. As noted above widening of the State Route 99 bridge over the Stanislaus River will be required for ramp extensions. Figure 2 presents the design components of Alternative 1.

Alternative 2 is a Modified Partial Cloverleaf interchange alternative. The bridge overcrossing must be replaced to accommodate vertical clearance with State Route 99. The reconstructed bridge will carry six lanes. Alternative 2 will accommodate predicted traffic volumes beyond year 2030. A loop northbound on-ramp will be constructed to accommodate the additional traffic entering State Route 99. As noted above, the northbound onramp adds an auxiliary lane which will extend approximately 780 meters (or 300 meters beyond the merge point of the northbound diagonal ramp) and may require minor improvements to the State Route 99 Bridge over the Stanislaus River. The bridge crossing the Stanislaus River will be widened to accommodate components of the Alternative 2 interchange. Figure 3 presents the design components for Alternative 2.

The **No Build** alternative will also be considered. No new interchange improvements would occur with this alternative and the interchange would become a traffic bottleneck for motorists accessing State Route 99 or to simply cross the mainline. Unacceptable levels of service would occur and the interchange would not accommodate predicted traffic volumes.

Funding
The project is anticipated to be funded by a combination of Public Facility Fee (PFF), future sales tax revenue and funding from the State Transportation Improvement Program (STIP). Stanislaus County has currently collected some traffic mitigation funds through City/County Transportation Facilities Public Facility Fee (PFF) program. The anticipated collection through the PFF is $50-$100 million for this project. The County is currently pursuing STIP funding for construction phases to cover any shortfalls.

Anticipated Environmental Approval

CEQA	NEPA
☐ **Categorical Exemption/Statutory Exemption**	☐ **Categorical Exclusion/Programmatic CE**
☒ **Negative Declaration/Mitigated ND**	☒ **Finding of No Significant Impact**
☐ **Environmental Impact Report**	☐ **Environmental Impact Statement**

PSR Summary Statement

The anticipated document for the proposed project is an Initial Study/Mitigated Negative Declaration for the California Environmental Quality Act and an Environmental Assessment/Finding of No Significant Impact for the National Environmental Policy Act. Caltrans would be the lead agency for the purposes of both the California Environmental Quality Act and the National Environmental Policy Act. Under the provisions established by the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU). Caltrans has been delegated authority to review and approve the NEPA process by the Federal Highway Administration (FHWA). Accordingly, on behalf of FHWA, Caltrans will serve as the lead agency for NEPA. Environmental review is expected to start in January 2009 and should be concluded by August 2010. A total of 2,400 – 2,600 person hours have been estimated to complete the identified tasks. The major environmental issues to be addressed include water quality and erosion, air quality and noise, cultural resources, hazardous waste/materials, farmland conversion, visual, and biological resources. The majority of the riparian and river related environmental issues are due to the expansion of lanes over the SR-99/Stanislaus River Bridge.

Assumptions and Risks

Assumptions:

- Scope as defined in current build alternatives
- New right-of-way acquisition from 10.69 acres (affecting 6 parcels) to 14.06 acres (affecting 8 parcels) will be required for the proposed project, depending on the build alternative.
- Federal Funding
- Biological Resources:
  - At least 1 federally listed species will be impacted
  - Assume formal Section 7 consultation with USFWS and NMFS
  - Assume that Section 7 consultation will take no more that 135 days
  - Mitigation for oak trees
  - Work window restrictions will be imposed during construction to avoid impacting fish migration, as well as other mitigation to minimize the fish impacts
- Cultural resources:
  - ASR, Extended Phase I, Archaeological Evaluation Report (AER), HRER, HPSR will be completed. If no resources are determined eligible this portion of the Section 106 process will require six months to complete.
  - Five cultural resources will require formal evaluation (including 2 buildings)
  - If resources are determined eligible, a Finding of Effect (FOE) will be required. If impacts are adverse a Memorandum of Agreement (MOA) and Historic Property Treatment Plan (HPTP) will address mitigation requirements. As a result of multi-agency participation, this portion of the Section 106 process can take an additional six months
  - Native American consulting parties do not object to methods/findings
- No hazardous waste issues.

- No cumulative impacts associated with traffic congestion.
- No visual impacts.
- No air quality impact due to carbon dioxide.

Risks:

- Moderate Probability/High Impact: Design plans change to include activities not currently identified in the request (November 2008) would increase project costs and schedule delay for cultural resources (1 additional year).
- Moderate Probability/High Impact: Impacts to additional federally listed species would increase mitigation costs and the proposed schedule (up to 1 year).
- Low Probability/High Impact: If additional archaeological or architectural properties requiring evaluation were identified in the APE, then increased project costs and schedule delay (up to 1 year) would occur.
- Low Probability/High Impact: FHWA/SHPO disagrees with effects finding and require extended MOA consultation, then increased project costs and schedule delay (up to 6 months) would occur.
- Low Probability/High Impact: Significant Native American controversy would increase costs and delay schedule 6 months to 1 year.
- Low Probability/High Impact: If unforeseen issues of hazardous waste, visual, air quality, or cumulative impacts due to traffic are encountered, then increased project costs, schedule delay (up to 6 months) would occur.
- Low Probability/Moderate Risk: Significant public controversy necessitating a public meeting would add 4-6 months to schedule.

Mitigation

Mitigation estimates are based on preliminary studies from the proposed project and without necessary concurrence from federal resource agencies. Therefore, final mitigation costs may vary from those provided in this document.

Right of Way Capital (050) Total: $ 220,000

$220,000 for biological resources including $25,000 for VELB mitigation and $15,000 for oak tree removal

Construction Capital (042) Total: $190,000

$145,000 for historical and archeological resources mitigation
$35,000 for hazardous materials abatement
$10,000 for paleontological resources mitigation

Discussion of Technical Review

Socio-economic and Community Effects

The project is not expected to have any effects on the local community or the economy. At present, there are no residential uses or business and commercial uses in the immediate interchange area. Proposed improvements do not cause any direct effects on an established neighborhood, nor affect any known group that might be subject to issues involving environmental justice. None of the project alternatives affect socio-economic or community interests any differently than the existing interchange improvements and support circulation network. However, as a result of the supporting roadway network, there is a potential to indirectly impact neighborhoods proximate to the interchange improvements. Therefore, a Community Impact Analysis will be conducted to analyze any potential effects the project may have on the existing nearby community/neighborhoods. This may take an estimated 2 months for completion. No additional permits or agency coordination required.

Farmlands

On the west side of the project area, farmlands could be affected by the widening of Hammett Road. In this area, an orchard is present between the Union Pacific Railroad railroad tracks and Hammett Court. Approximately 10 acres could be impacted. On the east side, the extension of Ladd Road to Pirrone Road will encroach into farmlands, and could impact fallow farmland, a small portion of an orchard, and an area planted in row crops. Both Ladd Road and Pirrone Road will ultimately divide the lands planted in row crops when the area is developed in accordance with the Salida Community Plan. A Farmland Conversion Study will be necessary to assess the effects from loss of farmlands. This may take an estimated 2-3 months for completion. Coordination with the USDA Soil Conservation Service will be needed. No additional permits are required.

Section 4(f) Impacts

(Not Applicable) The project is not expected to have 4(f) issues as a result of any temporary or permanent impacts on recreational facilities. No additional permits or agency coordination required. It should be noted, however, that an existing bike trail must be realigned within the interchange area to accommodate the modified geometry.

Visual Effects

Tree losses within the Stanislaus River corridor area (due to SR-99 bridge widening) and along roadways in the agricultural areas (from the support roadway network) are expected. Accordingly, a Scenic Resources Evaluation should be prepared to document the potential presence of scenic resources. As scenic resources are expected in the project area, it is anticipated that further visual studies (i.e., Visual Impact Assessment) will be necessary. This may take an estimated 1 month for completion. No additional permits or agency coordination required.

Water Quality and Erosion

The site is not expected to have any unusual water quality problems. No water resources are located within the project area that might be affected by erosion or runoff from new roadway surfaces.

The Stanislaus River is located almost 1/2-mile to the north, although is not a direct receiver of runoff from the interchange. Widening of the SR-99 bridge crossing over the Stanislaus River will require Best Management Practices to ensure that construction impact do not negatively impact water quality. Conveyance mechanisms should be included in the bridge widening to convey storm water runoff away from the river.

Since the interchange currently exists, drainage conditions are pre-existing for the reconstructed interchange features. Additional runoff will be generated by the widening of Hammett Road, as well

as from the extension of Ladd Road and Pirrone Road. However, the additional runoff should not create any new water quality issues and can be addressed through the application of standard water quality measures and Best Management Practices. If site dewatering is required for new construction, a dewatering plan is required. Nonetheless, a Water Quality Assessment report will be required to characterize the project's contribution to water quality concerns. A Section 401 Water Quality Certification will likely be required as well as NPDES coordination with the RWQCB for these temporary impacts. This may take an estimated 1-2 months for completion.

Floodplain

The project site is not located within the 100-year floodplain, and has no unusual flood or drainage issues. The project's effect from implementing the build alternatives on local drainage should be discussed, including the use of basins within the interchange footprint to detain runoff during peak storm conditions. The widening of the bridge over the Stanislaus River should not noticeably impact the floodplain and water surface elevation. A technical Floodplain Analysis will be conducted by the project engineer as needed to estimate additional runoff, and define a strategy/design concept for accommodating additional stormwater. Agency coordination may be required with the Central Valley Flood Protection Board. This may take an estimated 1-2 months for completion.

Air Quality

Potential air quality issues are expected from reconstruction of the interchange. An air quality analysis will be required to determine project-specific impacts, conformity and mitigation. Standard dust control measures and compliance with San Joaquin Valley Air Pollution Control District rules and regulations will be required during construction. This may take an estimated 6-8 weeks for completion. Coordination will be required with San Joaquin COG and Caltrans regarding air quality conformity consultation processes. The air quality conformity analysis must identify the status of this project as a potential project of air quality concern. No additional permits are required.

Noise

Potential short term noise issues are expected from reconstruction of the interchange. While the existing interchange does not have any direct affect on existing sensitive receptors, the new interchange includes the support circulation network and could have a long term impact on the adjacent residential subdivision. A noise study will be required to analyze these potential short term and/or long term impacts. A noise barrier may be required as attenuation for sensitive receptors. A Noise Abatement Decision document would also be required if a noise barrier is proposed. This may take an estimated 6-8 weeks for completion. No additional permits or agency coordination required.

Wild and Scenic River

(Not Applicable) The Stanislaus River is a not federally designated wild and scenic river. The interchange reconstruction will have a minor effect on the river where additional columns are needed to support SR-99/Stanislaus River bridge widening. No additional permits or agency coordination required.

Paleontology

The project area has the potential to contain Pleistocene sediments located within the Modesto Formation. Moderately developed Holocene soils overlying the Pleistocene deposits and the potential need for drainage basins within the project area suggest a potential for encountering paleontological resources during construction activities. A Paleontological Identification Report (PIR) would be prepared and certified by a qualified paleontologist to document the identification efforts for paleontological resources and the need for paleontological monitoring during construction activities based on project design. If paleontological resources are identified during construction monitoring, a Paleontological Evaluation Report (PER) will be prepared by a qualified paleontologist to evaluate the significance of the paleontological resource within the project area. This may take an estimated 3 months for completion. No additional permits or agency coordination required.

Cultural Resources

Research on previous cultural studies conducted in the area identified four cultural resources that will require evaluation for eligibility for listing in the National Register, if the final Area of Potential Effect boundary includes these resources: a segment of the Union Pacific Railroad, fruit orchards and vineyards which may be part of a cultural landscape, a farmstead, and Lateral #8 of the Modesto Main Canal.

Cultural resource studies are needed to address Section 106 of the National Historic Preservation Act, in accordance with the *Programmatic Agreement among the Federal Highway Administration, the Advisory Council on Historic Preservation, the California State Historic Preservation Officer, and Caltrans regarding Compliance with Section 106 of the National Historic Preservation Act* (Caltrans 2004). The proposed Area of Potential Effect must include all access roads, work areas and staging areas beyond the existing paved highway.

Findings of the HRER/ASR will be presented in the HPSR. A Finding of Effect (FOE) will be required to evaluate the project's impact on National Register eligible properties. If eligible cultural resources are not impacted by the project, the project's Section 106 responsibilities would be fulfilled. This portion of the Section 106 process may take up to six months to complete. Any subsequent changes in project scope may require additional archaeological or historical review. Coordination may be required with SHPO if eligible resources are impacted.

Native American Coordination

On May 5, 2008, LSA sent a letter with maps depicting the project area to the Native American Heritage Commission (NAHC) in Sacramento asking the commission to review their sacred lands file for any Native American cultural resources that might be affected by the project. A fax from a NAHC Program Analyst informed LSA that a review of the Sacred Lands File did not "indicate the presence of Native American cultural resources in the immediate project area." A list of Native American contacts was also provided. Those individuals from the list have been contacted and no concerns were identified. No additional permits or agency coordination required.

Hazardous Waste/Materials

An Initial Site Assessment (ISA) has been conducted for the proposed interchange reconstruction. The ISA included a government records search and a site survey for potential hazardous wastes and materials. There is some evidence of contamination from existing or past land uses, activities or operations, which would present potential hazards for construction workers. The site survey determined that reflective paint was used on the Union Pacific Railroad Bridge overcrossing (south side only) that could contain lead. Hazardous thermoplastic striping material has been used to designate travel lanes. Removal and disposal of the striping must be conducted in accordance with applicable safety laws and regulations. Testing for lead in the reflective paint and the potential for

hazardous waste is required. Testing to ensure that the agricultural lands do not contain hazardous wastes from agricultural practices, or UPRR lands will be required. The risk ranking for the interchange is considered low.

Studies for aerially deposited lead (ADL) will be conducted prior to construction activities. If Naturally Occurring Asbestos (NOA) is suspected, testing will also be conducted. Measures will be identified to protect the health and safety of construction workers. This may take an estimated 5-6 months for completion. No additional permits or agency coordination required.

Biological Resources

The project could impact an existing blue elderberry (*Sambucus mexicana*) plant that potentially provides habitat for the valley elderberry longhorn beetle (VELB). Formal Section 7 consultation with the USFWS for the VELB would be required.

Impacts to aquatic species (anadromous fish) are expected due to the widening of the State Route 99 Bridge over the Stanislaus River as needed to accommodate interchange geometry. Additional columns will be needed in the river channel for the widening improvements. A Biological Assessment would be required to address federally listed fish species. Consultation with the NOAA/NMFS for anadromous fish may be required due to potential effects on fish spawning and fish passage. It is anticipated work window restrictions will be imposed during construction to avoid impacting fish migration, as well as other mitigation to minimize the fish impacts.

Both the existing State Route 99/Stanislaus River bridge and the State Route 99/Hammett Road bridge should be inspected for the presence/absence of bats, nesting swallows, and other protected migratory bird species. Existing ground squirrel burrows should be inspected for the presence of burrowing owls. Swainson's hawk preconstruction surveys should be conducted based on tree removal activities. Bird and bat surveys should be completed in the spring/summer season. If present, bats, swallows and burrowing owls must be excluded prior to initiating construction.

Several interior live oaks (*Quercus wislizenii*) occur within the Stanislaus River corridor, near the existing interchange and along roadway shoulders and may be removed. A Natural Environment Study will be required to address general biological resources, including both plant and wildlife species. This may take an estimated 9-10 months (including consultation with federal agencies) for completion.

Wetlands

Based on reconnaissance level field review, it appears that the only wetlands likely present within the project boundary subject to Army Corps of Engineers jurisdiction occur within the Stanislaus River corridor. Widening of the bridge deck over the Stanislaus River may temporarily impact jurisdictional waters during construction. As confirmation, a jurisdictional delineation will be necessary to identify potential wetlands or special aquatic site habitat areas, followed by an impact assessment. If the project will create impacts to jurisdictional waters, a nationwide permit (Section 404/Corps of Engineers) will likely be required. Impacts to waters of the U.S. may also trigger a Section 401 Water Quality Certification from the RWQCB. Impacts to riparian areas would require a Section 1602 Streambed Alteration Agreement from the CDFG. In addition coordination with the U.S. Coast Guard (Section 10) is necessary due to the navigability of the Stanislaus River. These permits/agreements may take an estimated 3-4 months for completion.

Invasive Pest Plant Species

Executive Order 13112 requires that any federal action may not cause or promote the spread or introduction of invasive species. This project will use machinery capable of transporting invasive

plant species on and off the project site. To avoid spreading invasive plant species, all earthmoving and seeding equipment will be thoroughly washed before entering the site and prior to leaving. No additional permits or agency coordination required.

Right-of-Way Relocation or Staging Area

New right-of-way will be required for this project. It is expected that staging will occur primarily within the open areas of the existing interchange, although some adjacent lands may also be required. Material sites and disposal sites will be required, but have not yet been identified. Areas of right-of-way acquisition and staging areas will require complete environmental evaluation as part of this project. No additional permits or agency coordination required.

Permits

Widening of the SR-99 bridge deck over the Stanislaus River may impact jurisdictional waters during construction and from additional bridge columns. A Nationwide Permit (Section 404), Section 1602 Streambed Alteration Agreement, Section 401 Water Quality Certification, and U.S. Coast Guard (Section 10) Advance Approval will likely be required for these impacts (also refer to Wetlands above).

Coastal Zone

(Not Applicable) This project is not within the coastal jurisdiction. No additional permits or agency coordination required.

Attachment I –Cooperative Agreement

10-STA-99-24.4
State Route 99/Hammett Road
Interchange Modifications
EA: 10-0L320
District Agreement No. 10-327

COOPERATIVE AGREEMENT

THIS AGREEMENT, ENTERED INTO EFFECTIVE ON December 10, 2008, is between the STATE OF CALIFORNIA, acting by and through its Department of Transportation, referred to herein as "STATE", and the

County of Stanislaus, a political subdivision of the State of California, referred to herein as "COUNTY".

RECITALS

1. STATE and COUNTY, pursuant to Streets and Highways Code sections 114 and 130, are authorized to enter into a Cooperative Agreement for improvements to the State Highway System (SHS) within Stanislaus County.

2. COUNTY intends to modify the interchange at State Route (SR) 99 and Hammett Road, referred to herein as "PROJECT"

3. COUNTY is willing to fund one hundred percent (100%) of costs, except that the costs of STATE's Independent Quality Assurance (IQA) of PROJECT Project Approval and Environmental Document (PA&ED) hereinafter referred to as WORK, and STATE's costs incurred as the California Environmental Quality Act (CEQA) Lead Agency and National Environmental Policy Act (NEPA) Lead Agency, if applicable, in the review and approval of the PROJECT environmental documentation prepared entirely by COUNTY, will be borne by STATE.

4. STATE funds will not be used to finance any of the WORK costs except as set forth in this Agreement.

5. The terms of this Agreement shall supersede any inconsistent terms of any prior Memorandum of Understanding (MOU) or agreement relating to PROJECT.

6. PROJECT Plans, Specifications and Estimates (PS&E), Right of Way (R/W), landscape maintenance and construction will be the subject of a separate future agreement or agreements.

7. This Agreement will define roles and responsibilities of the CEQA Lead Agency and CEQA Responsible Agency regarding environmental documentation, studies, and reports necessary for compliance with CEQA. This Agreement will also define roles and responsibilities for compliance with NEPA, if applicable.

8. The parties now define herein below the terms and conditions under which PROJECT is to be developed and financed.

SECTION I

COUNTY AGREES:

1. To fund one hundred percent (100%) of all WORK costs except for costs of STATE's IQA and STATE's review and approval of the PROJECT environmental documentation for CEQA and NEPA, if applicable.

2. To not use STATE funds for any WORK costs except as set forth in this Agreement.

3. All PROJECT work performed by COUNTY, or performed on COUNTY's behalf, shall be performed in accordance with all State and Federal laws, regulations, policies, procedures, directives and standards that STATE would normally follow. All such PROJECT work shall be submitted to STATE for STATE's review, comment, concurrence, and approval at appropriate stages of development.

4. All PROJECT work, except as set forth in this Agreement, is to be performed by COUNTY. Should COUNTY request that STATE perform any portion of PROJECT work, except as otherwise set forth in this Agreement, COUNTY shall first agree to reimburse STATE for such work pursuant to an amendment to this Agreement or a separate executed Agreement.

5. To have a Project Report (PR) prepared, at no cost to STATE, and to submit to STATE for STATE's review and concurrence at appropriate stages of development.. The PR for PROJECT shall be signed on behalf of COUNTY by a Civil Engineer registered in the State of California.

6. Personnel who prepare the preliminary engineering studies and environmental documentation, including investigative studies and technical environmental reports, shall be made available to STATE, at no cost to STATE, through completion of PROJECT construction to discuss problems, which may arise during PS&E, right of way, and construction phases of the PROJECT, and/or to make design revisions for contract change orders.

7. To permit STATE to monitor, participate, and oversee selection of personnel who will prepare the PR, conduct environmental studies and prepare environmental documentation, for PROJECT. COUNTY agrees to consider any request by STATE to avoid a contract award or to discontinue services of any personnel considered by STATE to be unqualified on the basis of credentials, professional expertise, failure to perform, and/or other pertinent criteria.

8. To make written application to STATE for necessary encroachment permits authorizing entry of COUNTY onto SHS right of way to perform required WORK as more specifically defined elsewhere in this Agreement. COUNTY shall also require COUNTY's consultants and contractors to make written application to STATE for the same necessary encroachment permits.

9. To be responsible for, and to the STATE's satisfaction, the investigation of potential hazardous material sites within and outside existing SHS right of way that could impact PROJECT as part of performing any work pursuant to this Agreement. If COUNTY discovers hazardous material or contamination within the PROJECT study area during said investigation, COUNTY shall immediately notify STATE.

10. If COUNTY terminates the WORK prior to completion, COUNTY shall also be liable to compensate STATE for all the expenses incurred by STATE with regard to this Agreement.

SECTION II

STATE AGREES:

1. At no cost to COUNTY, to complete STATE's review as CEQA Lead Agency and NEPA Lead Agency, if applicable, of the environmental documentation prepared and submitted by COUNTY and to provide IQA of all COUNTY WORK necessary for completion of the PR for PROJECT done by COUNTY, including, but not limited to, investigation of potential hazardous material sites undertaken by COUNTY or its designee, and provide prompt reviews, comments, concurrence, and/or approvals as appropriate, of submittals by COUNTY, while cooperating in timely processing of documents necessary for completion of the environmental documentation and PR for PROJECT.

2. Upon proper application by COUNTY and by COUNTY's contractor, to issue, at no cost to COUNTY and COUNTY's contractor, the necessary encroachment permits for required work within the SHS right of way as more specifically defined elsewhere in this Agreement.

SECTION III

IT IS MUTUALLY AGREED:

1. All obligations of STATE under the terms of this Agreement are subject to the appropriation of resources by the Legislature, State Budget Act authority and the allocation of funds by the California Transportation Commission (CTC).

2. The parties to this Agreement understand and agree that STATE's IQA is defined as providing STATE policy and procedural guidance through to completion of the PROJECT PA&ED phase administered by COUNTY. This guidance includes prompt reviews by STATE to assure that all work and products delivered or incorporated into the PROJECT by COUNTY conform with then existing STATE standards. IQA does not include any PROJECT related work deemed necessary to actually develop and deliver the PROJECT, nor does it involve any validation to verify and recheck any work performed by COUNTY and/or its consultants or contractors and no liability will be assignable to STATE, its officers and employees by COUNTY under the terms of this Agreement or by third parties by reason of STATE's IQA activities. All work performed by STATE that is not direct IQA shall be chargeable against PROJECT funds as a service for which STATE will invoice its actual costs and COUNTY will pay or authorize STATE to reimburse itself from then available PROJECT funds pursuant to an amendment to this Agreement authorizing such services to be performed by STATE.

3. The preparation of environmental documentation, including the related investigative studies and technical environmental reports for PROJECT shall be performed in

accordance with all applicable Federal and STATE standards and practices current as of the date of performance.

4. STATE will be the CEQA Lead Agency and COUNTY will be a CEQA Responsible Agency. STATE will be the NEPA Lead Agency, if applicable. COUNTY will assess PROJECT impacts on the environment and COUNTY will prepare the appropriate level of environmental documentation and necessary associated supporting investigative studies and technical environmental reports in order to meet the requirements of CEQA and if applicable, NEPA. COUNTY will submit to STATE all investigative studies and technical environmental reports for STATE's review, comment, and approval. The environmental document and/or categorical exemption/exclusion determination, including the administrative draft, draft, administrative final, and final environmental documentation, as applicable, will require STATE's review, comment, and approval prior to public availability.

   If, during preparation of preliminary engineering, preparation of the PS&E, performance of right of way activities, or performance of PROJECT construction, new information is obtained which requires the preparation of additional environmental documentation to comply with CEQA and if applicable, NEPA, this Agreement will be amended to include completion of those additional tasks by COUNTY.

5. COUNTY agrees to obtain, as a PROJECT cost, all necessary PROJECT permits, agreements, and/or approvals from appropriate regulatory agencies, unless the parties agree otherwise in writing. If STATE agrees in writing to obtain said PROJECT permits, agreements, and/or approvals, those said costs shall be a PROJECT cost.

6. COUNTY shall be fully responsible for complying with and implementing any and all environmental commitments set forth in the environmental documentation, permit(s), agreement(s), and/or environmental approvals for PROJECT. The costs of said compliance and implementation shall be a PROJECT cost.

7. If there is a legal challenge to the environmental documentation, including supporting investigative studies and/or technical environmental report(s), permit(s), agreement(s), environmental commitments and/or environmental approval(s) for PROJECT, all legal costs associated with those said legal challenges shall be a PROJECT cost.

8. COUNTY, subject to STATE's prior review and approval, as a PROJECT cost, shall be responsible for preparing, submitting, publicizing and circulating all public notices related to the CEQA environmental process the NEPA, if applicable, environmental process, including, but not limited to, notice(s) of availability of the environmental document and/or determinations and notices of public hearings. Public notices shall comply with all State and Federal laws, regulations, policies and procedures. STATE will work with the appropriate Federal agency to publish notices in the Federal Register, if applicable.

STATE, as a PROJECT cost, shall be responsible for overseeing the planning, scheduling and holding of all public meetings/hearings related to the CEQA environmental process and if applicable, the NEPA environmental process. COUNTY, to the satisfaction of STATE and subject to all of STATE's and FHWA's policies and procedures, shall be responsible for performing the planning, scheduling and details of holding all public meetings/hearings related to the CEQA environmental process and if applicable, the NEPA environmental process. STATE will participate as CEQA Lead Agency and if applicable, the NEPA Lead Agency, in all public meetings/hearings related to the CEQA environmental process and if applicable, the NEPA environmental process, for PROJECT. COUNTY shall provide STATE the opportunity to provide comments on any public meeting/hearing exhibits, handouts or other materials at least ten (10) days prior to any such public meetings/hearings. STATE maintains final editorial control of exhibits, handouts or other materials to be used at public meetings/hearings.

9. In the event COUNTY would like to hold separate and/or additional public meetings/hearings regarding the PROJECT, COUNTY must clarify in any meeting/hearing notices, exhibits, handouts or other materials that STATE is the CEQA Lead Agency and if applicable, the NEPA Lead Agency, and COUNTY is the CEQA Responsible Agency. Such notices, handouts and other materials shall also specify that public comments gathered at such meetings/hearings are not part of the CEQA and if applicable, NEPA, public review process. COUNTY shall provide STATE the opportunity to provide comments on any meeting/hearing exhibits, handouts or other materials at least ten (10) days prior to any such meetings/hearings. STATE maintains final editorial control of exhibits, handouts or other materials to be used at public meetings/hearings solely with respect to text or graphics that could lead to public confusion over CEQA and if applicable, NEPA, related roles and responsibilities.

10. All administrative reports, studies, materials, and documentation, including, but not limited to, all administrative drafts and administrative finals, relied upon, produced, created or utilized for PROJECT will be held in confidence pursuant to Government Code section 6254.5(e). The parties agree that said material will not be distributed, released or shared with any other organization, person or group other than the parties' employees, agents and consultants whose work requires that access without the prior written approval of the party with the authority to authorize said release and except as required or authorized by statute or pursuant to the terms of this Agreement.

11. The party that discovers HM will immediately notify the other party(ies) to this Agreement.

HM-1 is defined as hazardous material (including but not limited to hazardous waste) that requires removal and disposal pursuant to federal or state law, whether it is disturbed by PROJECT or not.

HM-2 is defined as hazardous material (including but not limited to hazardous waste) that may require removal and disposal pursuant to federal or state law, only if disturbed by PROJECT.

12. STATE, independent of PROJECT, is responsible for any HM-1 found within existing SHS right of way. STATE will undertake HM-1 management activities with minimum impact to PROJECT schedule and will pay all costs for HM-1 management activities.

    COUNTY, independent of PROJECT, is responsible for any HM-1 found outside existing SHS right of way. COUNTY will undertake HM-1 management activities with minimum impact to PROJECT schedule and will pay all costs for HM-1 management activities.

13. If HM-2 is found within the limits of PROJECT, the public agency responsible for advertisement, award, and administration (AAA) of the PROJECT construction contract will be responsible for HM-2 management activities.

    Any management activity cost related to HM-2 is a PROJECT construction cost.

14. Management activities related to either HM-1 or HM-2 include, without limitation, any necessary manifest requirements and designation of disposal facility.

15. STATE's acquisition or acceptance of title to any property on which any hazardous material is found will proceed in accordance with STATE's policy on such acquisition.

16. Remedial actions proposed by COUNTY on SHS right of way shall be pre-approved by STATE and shall be performed in accordance with STATE's standards and practices and standards and practices mandated by those Federal and State regulatory agencies.

17. A separate Cooperative Agreement or agreements will be required to address and cover responsibilities and funding for PS&E, R/W, landscape maintenance, and the construction phase of PROJECT.

18. Nothing within the provisions of this Agreement is intended to create duties or obligations to or rights in third parties not parties to this Agreement or to affect the legal liability of either party to the Agreement by imposing any standard of care with respect to the development, design, construction, operation, or maintenance of the SHS and public facilities different from the standard of care imposed by law.

19. Neither STATE nor any officer or employee thereof is responsible for any injury, damage, or liability occurring by reason of anything done or omitted to be done by COUNTY under or in connection with any work, authority, or jurisdiction conferred upon COUNTY or arising under this agreement. It is understood and agreed that, COUNTY will fully defend, indemnify, and save harmless STATE and all of its officers and employees from all claims, suits, or actions of every name, kind and description brought forth under, including, but not limited to, tortious, contractual, inverse condemnation, or other theories or assertions of liability occurring by reason of anything done or omitted to be done by COUNTY under this agreement.

20. Neither COUNTY nor any officer or employee thereof is responsible for any injury, damage, or liability occurring by reason of anything done or omitted to be done by STATE under or in connection with any work, authority, or jurisdiction conferred upon STATE or arising under this agreement. It is understood and agreed that, STATE will fully defend, indemnify, and save harmless COUNTY and all of its officers and employees from all claims, suits, or actions of every name, kind and description brought forth under, including, but not limited to, tortious, contractual, inverse condemnation, or other theories or assertions of liability occurring by reason of anything done or omitted to be done by STATE under this agreement.

21. Prior to the commencement of any work pursuant to this Agreement, either STATE or COUNTY may terminate this Agreement by written notice to the other party.

22. No alteration or variation of the terms of this Agreement shall be valid unless made by a formal amendment executed by the parties hereto and no oral understanding or agreement not incorporated herein shall be binding on any of the parties hereto.

23. This Agreement shall terminate upon satisfactory completion of all PROJECT obligations of COUNTY and the delivery of required PA&ED PROJECT documents, with concurrence of STATE, or on January 6, 2015, whichever is earlier in time, except that the ownership, operation, maintenance, indemnification, environmental commitments, legal challenges, and claims articles shall remain in effect until terminated or modified, in writing, by mutual agreement. Should any claims arising out of PROJECT be asserted against one of the parties, the parties agree to extend the fixed termination date of this Agreement, until such time as the PROJECT claims are settled, dismissed or paid.
